

Trans-Trade Export Services

EXTENDING MARKETS FOR GLOBAL COMPETITIVE ADVANTAGE

Trans-Trade provides flexible logistics solutions that expedite your product deliveries to markets around the globe. Our export professionals will arrange for all licensing, documentation, transportation and destination country support so you can focus on expanding your business. All our solutions are comprised of professionals, processes and technologies that are fully controlled by Trans-Trade—so they can be configured rapidly and completely to meet your specific needs. The Trans-Trade Global Operating System (TT-G^{OS}) provides end-to-end process management and visibility for all elements of your global market solution.

◆ Freight Forwarding

Trans-Trade was founded as a freight forwarder in 1984 and has built a strong business on a reputation for phenomenal customer service, creative and flexible solutions and unparalleled global reach. Our freight forwarder services can be used as stand-alone or bundled together to create innovative supply chain solutions. As a single source provider, we equip you with our global network, comprehensive services and TT-G^{OS}, our advanced visibility system to help you manage your freight shipments.

Our air and ocean freight forwarding services bring those parts together to make managing your supply chain easier and more effective. We can also manage the transportation details - such as shipment booking, carrier routing, tariffs, and customs requirements - that cut into precious time and resources that can be better spent on growing your business and expanding your market reach.

◆ Transportation Services

Trans-Trade arranges transport for thousands of ocean and air shipments, truckloads and multimodal shipments every year. We are a licensed NVOCC and have contracts with multiple ocean and air carriers to virtually every major port in the world. Our transportation services teams work to provide maximum value and dependability for every shipment—and, of course, all shipments are tracked end-to-end by our TT-G^{OS} technology.

• Ocean Transportation Services

- **FCL**— Our contracts with multiple major carriers ensure premium availability and value to all world ports.
- **LCL**— We offer flexible consolidation/groupage services from all domestic origins to streamline LCL shipments direct to destination, eliminating entire days of transportation time and substantial consolidation costs.

• Air Transportation Services

- **Multi-line/Full-Service**— We have facilities onsite at DFW airport and adjacent to Alliance Airport and representation at every major airport in North America. We also have strong relationships with virtually every major airline in the world. Our services include everything from full aircraft charters (including the Antonov AN-225) to next-flight-out package express shipping. Our full range of air-freight services includes next-flight-out, overnight, 2nd day and 3-5 day service. We also offer consistently scheduled cargo consolidation shipments to a wide range of destinations.

◆ TSA-Certified Cargo Screening

Trans-Trade is one of the first TSA-certified cargo screening facilities in the DFW area and has continually upgraded processes and technologies to improve vigilance to protect air flight safety and security. Cargo screening is a mandatory program that will extend to *all cargo on all flights*. Trans-Trade is committed to providing thorough screening services and priority load positioning at DFW and Alliance airports. The combination of our on-airport location and advanced, certified screening program helps ensure our clients' air cargo is loaded out on its scheduled flight.

Trans-Trade takes airborne security and safety seriously and cooperates extensively with US CBP entities to ensure cargo and shipper compliance with all mandates and regulations. We are C-TPAT certified and participate in the TSA's "Known Shipper" program to document complete chain of custody for all shipments.

◆ Export Documentation

Global trade often requires extensive complex documentation for uninterrupted transport. Trans-Trade's export professionals are fully trained and equipped to provide consultation and completion services for all required documents and licenses. Examples include:

- Letter of credit examination and compliance
- Export licensing
- Government and military (DDD) permits and documentation
- Certificate of origin

◆ NAFTA Services

We have an entire multi-lingual team assigned to NAFTA cross-border services. We specialize in all types of NAFTA shipments to/from Mexico and Canada at all service levels. Our offices and agents on both sides of the borders facilitate rapid inspection/clearance and release through customs with efficient, cost-effective in-country transportation for secure, confirmed deliveries. Our NAFTA team will provide expert advice and oversight for all documentation, licensing, quota and duty management activities necessary for all compliance regulations. And, as with all Trans-Trade logistics activities, we provide end-to-end visibility through our **TT-GÖS** technology.
